Ajithkumar M

Cloud Engineer | AWS Engineer | DevOps Engineer

Chennai, India | 7358678572 | robertajithkumar97jr@gmail.com

PROFESSIONAL SUMMARY

AWS Cloud Engineer with 1.6 years of experience managing and provisioning core AWS infrastructure (EC2, S3, VPC, IAM) and building end-to-end CI/CD deployment pipelines. Hands-on experience with Docker, Kubernetes, Ansible, Terraform, Jenkins, and Linux administration. Skilled at automating application builds and deployments, and monitoring production workloads. Seeking to grow as a Cloud / DevOps Engineer delivering reliable, automated cloud infrastructure.

TECHNICAL SKILLS

Cloud Platform:	AWS (EC2, S3, VPC, IAM, ECR, Route 53, CloudWatch)
CI/CD & Version Control:	Jenkins, GitHub, Maven
Containers & Orchestration:	Docker, Kubernetes
Configuration & IaC:	Ansible, Terraform
Operating Systems:	Linux
Scripting:	Python
Web/Networking:	Nginx, DNS (Route 53)
Monitoring & Support:	CloudWatch, Monitoring tools, Ticketing tools

PROFESSIONAL EXPERIENCE

AWS Engineer / Cloud Practitioner

IAT Solutions | 1.6 Years

- Managed and provisioned core AWS infrastructure including EC2 instances, S3 buckets, VPC networking, and IAM roles/policies to support application hosting and access control.
- Designed and implemented an automated CI/CD pipeline for a Java Maven web application: GitHub webhook triggered Jenkins builds, Maven handled build and testing, Docker containerized the application, and images were pushed to Amazon ECR.
- Automated application deployment to AWS EC2 servers using Ansible, reducing manual deployment effort and deployment errors.
- Configured Nginx to expose the deployed application and used Route 53 for DNS management.
- Set up CloudWatch monitoring to track application and infrastructure health.

Order Management Executive

Tata Communications Transformation and Services Ltd | 3 Years

- Received and reviewed customer orders, ensuring completeness, accuracy, and compliance with business standards.
- Performed data entry and order creation, accurately capturing order details into the order management system.
- Tracked and updated order status, proactively notifying customers of changes or delays.
- Prepared daily, weekly, and monthly reports on order processing status, trends, and recurring issues.
- Monitored key performance indicators (KPIs) including order accuracy, order fulfillment time, and customer satisfaction.
- Troubleshot technical issues within the order management software to minimize processing delays.

PROJECTS

Automated Java Web Application Deployment on AWS

Real-time / Production-style CI/CD Deployment Project

- Developed and deployed a Java Maven-based web application on AWS EC2 with source code maintained on GitHub.
- Built a fully automated CI/CD pipeline: GitHub webhook triggered Jenkins, which ran Maven build/test, built a Docker image, and pushed it to Amazon ECR.
- Used Ansible to automate deployment of the containerized application onto the EC2 application server.
- Exposed the application via Nginx, managed domain routing through Route 53, and monitored the application using Amazon CloudWatch.

ACHIEVEMENTS

- **Xtra Mile Award** — Recognized for outstanding effort and best performance within the team.
- **Team Triumph Award** — Recognized for providing support and training to team members.

EDUCATION

Bachelor of Engineering (BE) – Electronics and Communication Engineering (ECE)

Vels University | 2019
